Q-Series

The Strongest Blender Is Now The Quietest

BRAWN. BRAINS. BLENDTEC.™

Q-Series Sound Reduction

With the development of the Q-Series sound reduction technology, Blendtec blenders continue to deliver the same industry leading performance, at a reduction of 10 decibels, roughly half of the audible sound associated with blender operations. Q-Series innovation allows customers with existing equipment the ability to apply some portions of the Q-Series sound reduction qualities to existing operations without replacing existing motor or jars.

- Sleek sound enclosure with a low profile that incorporates sound reduction technology
- Jar design reduces the sound associated with jar operations and delivers improved overall jar performance and durability. New jars come with a one year warranty
- The shape of the stainless steel blending platform dampens sound and drains liquid away from the blender motor
- Motor stand incorporates sound reduction baffles to dampen sound generated by the powerful Blendtec motor

- Breakthrough fan design delivers sound reduction technology while improving motor air flow and cooling capacity
- Vibration dampening gasket reduces sound generated between blending platform and motor stand
- The Q-Series sound components can be utilized with the Smoother, SpaceSaver, ABC, and Titan models. The simple upgrade to Q-Series components does not require special tools, and only takes a couple of minutes to make the conversion
- **FOR IN-COUNTER MODELS:** Gel gasket not only dampens the vibration between the counter and sound enclosure, but also prevents spills from entering the motor area

THE Q-SERIES MAKES YOUR BLENDER THE STRONG, SILENT TYPE.
